Trustify

Online notarization for Vietnam

One workflow for applicants and notary offices.

Product pitch
October 2026

Trustify

Document work needs a visible next step

01	**Preparation**	People need to know which documents to bring.
02	**Review**	Applicants need to see what the notary needs next.
03	**Retrieval**	Issued documents need a clear path back to their records.

Product hypothesis to validate with applicants and licensed notary offices

Who Trustify serves

A shared case connects the people doing the work.

01

Individuals

Prepare a hồ sơ công chứng and follow its progress.

02

Businesses

Coordinate recurring document work with a notary office.

03

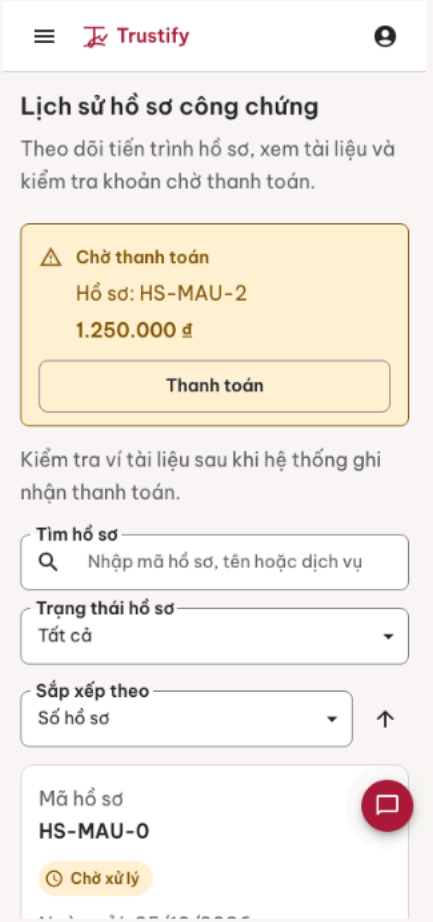

Notary offices

Review cases, request corrections and manage sessions.

Trustify

One case across the entire workflow

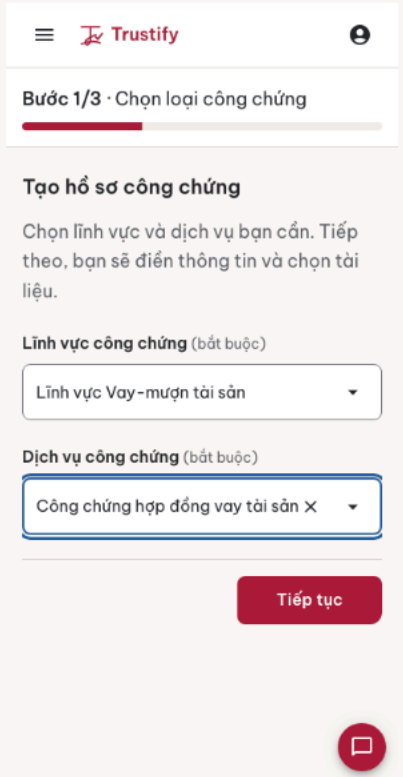

1	**Submit**	Service, details and supporting files
2	**Review**	Notary assessment and requested corrections
3	**Sign**	Signing step in the application
4	**Complete**	Payment status, issued files and wallet

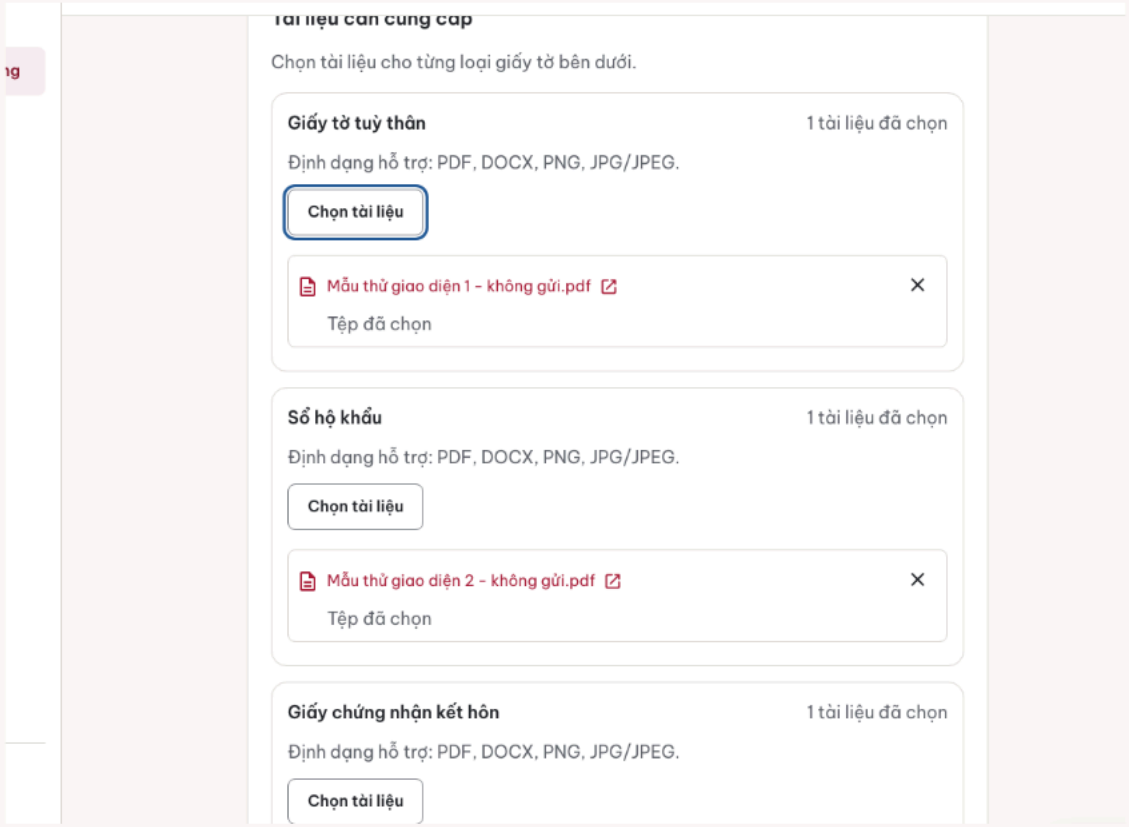

Synthetic demonstration data

Trustify

Guided submission in Vietnamese

Prepare with fewer unknowns

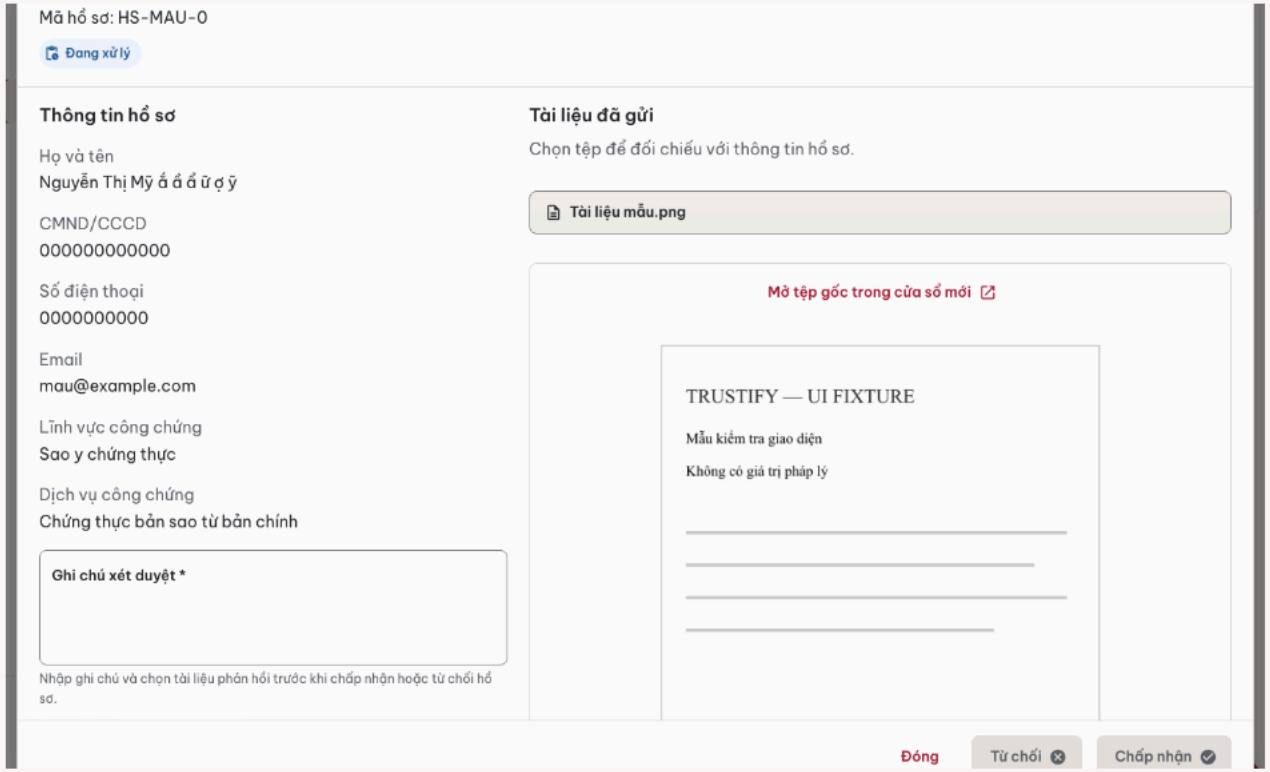

Step-by-step forms

File selection and preview

A review step before sending

Trustify

A focused workspace for notary review

Queue context and document preview

Review case information alongside the submitted file.

Keep the current state and next action visible.

Synthetic demonstration case. The sample document has no legal value.

Trustify

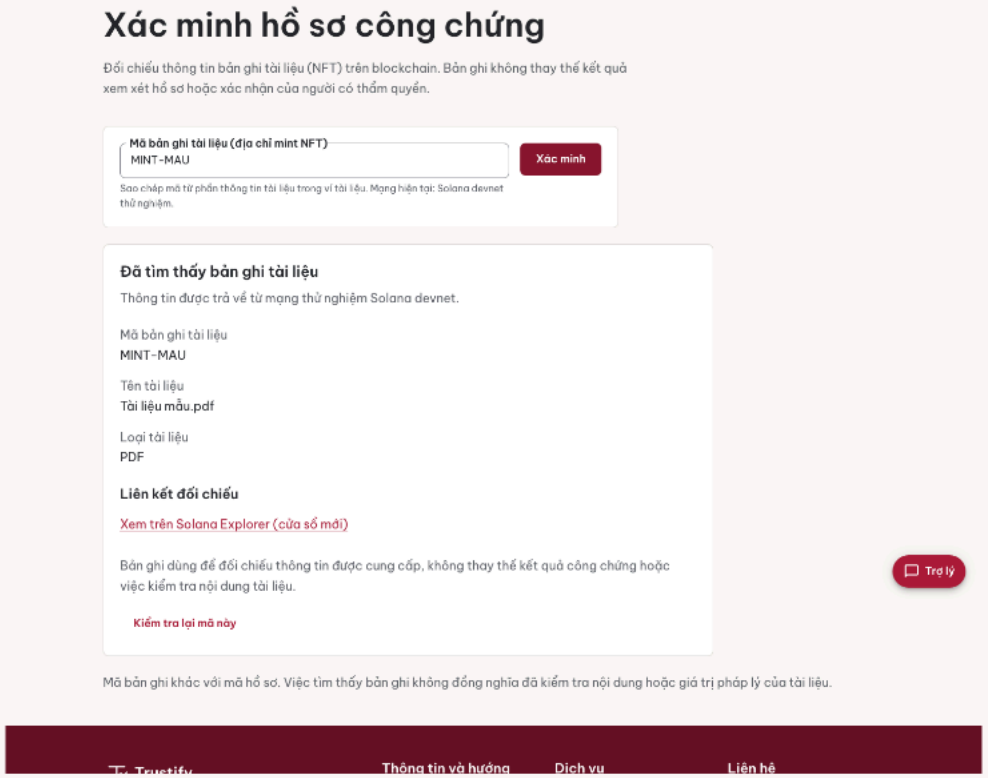

Document verification with a record to inspect

Document file

Stored off-chain through IPFS and Pinata.

Certificate reference

NFT metadata on Solana devnet links the record to the file.

Current integration uses a test network. A blockchain record alone does not establish legal validity.

A working technical foundation

Web application	React 18, Redux Toolkit and Material UI Vietnamese workspaces for users, notaries and admins
Application services	Node.js, Express and MongoDB JWT and Google OAuth, with PayOS payments
Document records	Solana Web3.js, Metaplex and IPFS Devnet NFT minting and file references
Assistant	Gemini integration Guidance on documents and procedures

Trustify

A business model to validate

The first commercial question is whether offices will pay for clearer case management.

Office subscription

A proposed recurring fee for workflow tools and case visibility.

Platform service fee

A hypothesis to test only where the applicable service and fee rules allow it.

Proposed model. Pricing and willingness to pay remain unvalidated.

Trustify

A pilot with clear readiness gates

01 **Product validation**

Observe applicants and notaries using real tasks in a controlled pilot.

02 **Legal and security review**

Confirm eligible workflows, identity checks, signing and data handling with qualified partners.

03 **Operational launch plan**

Set a verified fee catalog, support process and production infrastructure requirements.

Proposed next step: agree on pilot scope and success measures with a licensed office.

Trustify

Looking for notary-office pilot partners

Help shape a practical workflow for Vietnamese applicants and notaries.
